

Support Triage Desk

Triage and answer every ticket in one place.

Track 1 • Retail / CX Operations

Built with OpenAI Agents SDK + Codex

100% synthetic data

Support backlogs and inconsistent answers

First reply

slow first-response time is the #1 driver of low CSAT.

Copy-paste

agents hunt the knowledge base and paste policy by hand.

Inconsistent

two agents, two different answers to the same question.

Triage, policy lookup and a first-draft reply are exactly what an agent can prepare in seconds.

Three agents prepare, the human sends

1

Triage

Intent, category, sentiment, priority and gaps.

2

Knowledge

Relevant KB articles, cited to the exact line.

3

Reply

On-policy draft + suggested action + confidence.

Guardrail: money, anger or missing info forces human review before anything is sent.

Open a ticket, watch it get answered

Inbox to answer

Pick a ticket; it is triaged and a reply is drafted live in the composer.

Grounded in policy

The reply cites the knowledge-base article it is based on.

Send or escalate

Edit, then Send or Escalate — every decision logged to the audit trail.

Faster, consistent, on-policy support

Seconds

to a ready-to-send, policy-grounded first reply.

Consistent

the same correct answer, every agent, every time.

Auditable

citations + audit trail for every resolution.

Scale: Any channel (email, chat, voice), any knowledge base, multilingual replies.

Every customer answered — fast, and on-policy.
